SMART JOB PORTAL SYSTEM

SDG: 9 – Industry, Innovation and Infrastructure

Presented By:

P.Soujanya– VTU26112 – 23UECS0854

Courses Handling Faculty:

Dr.S.Hemamalini – Assistant

Professor(Senior Grade)-M.E,Ph.D

INTRODUCTION

1

- A Job Portal Management System is a web-based application designed to connect job seekers and employers on a single platform.

2

- It provides an easy-to-use interface where users can search, view, and apply for jobs online from anywhere.

3

- Employers can post job vacancies with details such as skills, experience, and salary, and manage applicants efficiently.

4

5

- The system helps students and job seekers create professional profiles and upload their resumes for better visibility.

6

- It reduces the manual effort involved in traditional job searching and recruitment processes.

7

- Users can filter and search jobs based on category, location, skills, and experience level.

8

- The system maintains application status and provides real-time notifications to users.

9

- It enhances communication between job seekers and employers through automated updates and alerts.

- The system ensures secure login with role-based access control (Student, Employer, Admin).

- Overall, it simplifies, organizes, and digitalizes the recruitment process for better efficiency.

PROBLEM STATEMENT

1

2

- Job recruitment processes are often manual, unorganized, and time-consuming, leading to delays in hiring.
- Job seekers need to visit multiple platforms and websites to find suitable job opportunities, which is inefficient.
- There is no proper system available to track job applications and monitor their current status.
- Employers struggle to manage and organize large numbers of applicants effectively.
- Lack of a centralized database leads to data mismanagement and difficulty in accessing information.
- It is difficult to filter candidates based on required skills, qualifications, and experience.
- There is no proper communication system between job seekers and employers for updates and notifications.
- There is a high risk of duplicate applications or missing application records in manual systems.

OBJECTIVE(S)

1

2

3

4

5

6

7

8

9

- To develop a web-based Job Portal Management System that connects job seekers and employers on a single platform.
- To simplify and automate the recruitment process with features like job posting, job search, application tracking, and secure access.

PROPOSED SYSTEM

1

2

3

4

5

6

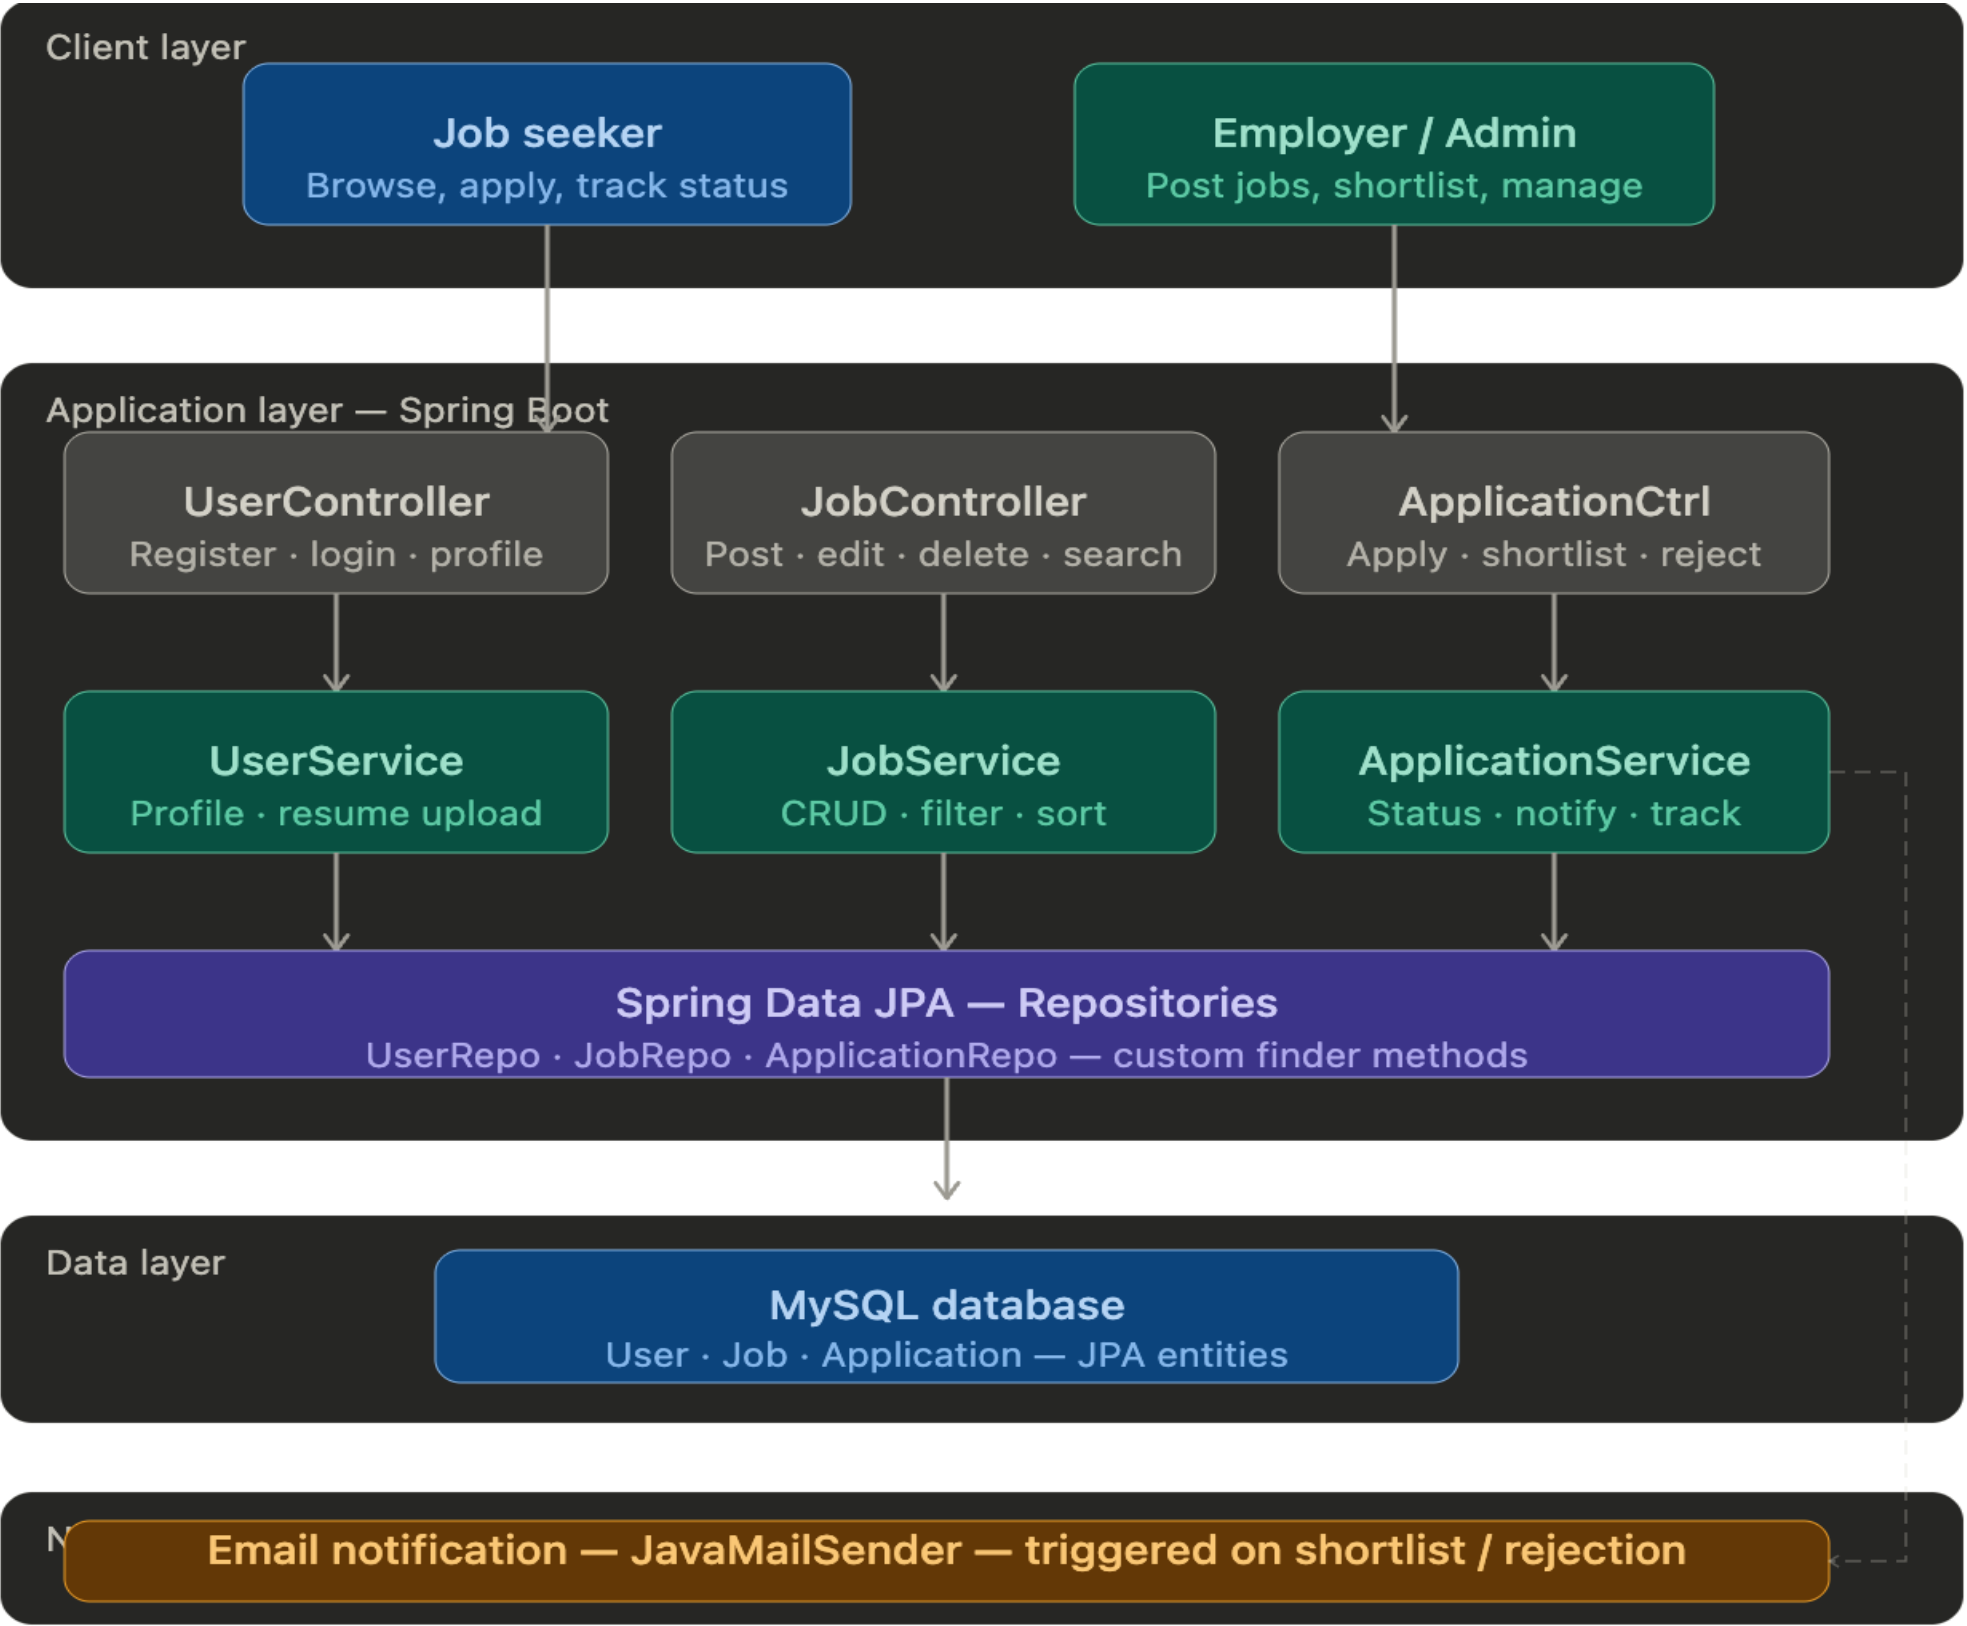

7

8

9

- The system is a web-based Academic Campus Event & Registration Portal.
- It allows students to securely register and log in to view available events.
- Students can register for events with duplicate prevention and deadline validation.
- Admin can log in separately to manage and monitor all event registrations.
- The system automatically stores and manages data in a centralized database.
- Real-time registration reports are generated for both students and admin.
- The portal improves transparency and reduces manual errors.
- It ensures secure, efficient, and organized event management.

PROPOSED SYSTEM ARCHITECTURE

PROPOSED SYSTEM ARCHITECTURE

1

- **Input:** User registration details, login credentials, job postings, resume uploads, and job applications.

2

- **Processing:** User authentication, job search and filtering, application submission, validation, and status tracking.

3

4

- **Database:** Stores user details, employer details, job listings, applications, and resume files.

5

- **Output:** Job listings, application status updates, notifications, user dashboard, and employer reports.

- 9

TECHNOLOGIES USED

1

- Frontend:

2

1.HTML5

3

2.CSS3

4

3.javascript

4.React JS

5

6

- Backend:

1.Node JS

7

- Database/Tools

8

1.Firebase

9

- Software Requirements:

1.Windows/Mac

2.Web Browser

MODULE DESCRIPTION

1

Module 1: Job Seeker (User) Module

2

Handles user registration, login, profile creation, resume upload, job search, and applying for jobs.

3

Module 2: Employer Module

4

Allows employer login, posting job vacancies, managing job listings, and viewing applicants.

5

Module 3: Job Management Module

6

Manages job details, job updates, filtering, searching, and deletion of job postings.

7

Module 4: Application Management Module

8

Handles job applications, application tracking, status updates, and shortlist/reject process.

9

Module 5: Notification Module

Generates email notifications and alerts for job applications, status updates, and job postings.

IMPLEMENTATION SCREENSHOTS

8(A)

9

The screenshot displays the 'Post New Job' form on the CareerFlow website. The form is centered on a dark blue background. It includes the following fields: 'Job Title' (text input with 'frontend developer'), 'Category' (dropdown menu with 'Engineering'), 'Location' (text input with 'hyderabad'), 'Salary (Annual \$)' (text input with '160000'), 'Experience Level' (dropdown menu with 'Entry Level'), 'Skills Required (comma separated)' (text input with 'React.js, JavaScript, HTML, CSS, Node.js, Git'), and 'Job Description' (text area with a sample description). At the bottom of the form are two buttons: 'Save Job Posting' (highlighted in purple) and 'Cancel'. In the top right corner, there are links for 'Jobs', 'Dashboard', and 'Logout'. A 'CareerFlow Assistant' chat window is open on the right side, displaying a greeting message and a text input field for the user.

- This page allows users or employer to create a new account by entering details like name, email, and password.
- It ensures secure user or employer registration and provides access to the job portal features after successful signup.

4

5

6

7

8(D)

9

- This page displays available job opportunities with details like job title, company, skills, and salary.
- It allows users to search jobs and view detailed information before applying.

ADVANTAGES & LIMITATIONS

1

ADVANTAGES:

- Reduces manual recruitment process and saves time.
- Easy job search and application for users.
- Employers can manage job postings and applicants efficiently.
- Provides real-time application tracking and updates.
- Centralized database ensures organized data management.

5

Limitations:

- Requires internet and system availability.
- Basic security (can be improved with advanced encryption).
- Depends on server availability (Spring Boot/MySQL).

6
