PROJECT REVIEW : MILESTONE PROJECT – 2

Date: 23-03-2026

Job Portal Management System

SDG: SDG No – Decent Work and Economic Growth

Presented By:

p.soujanya– VTU26112 – 23UECS0854.

Courses Handling Faculty:

Dr.S.Hemamalini–Assistantprofessor

INTRODUCTION

1

- Web-based application built using React

2

- Connects job seekers and employers in one platform

3

- Employers can post and manage job openings

4

- Job seekers can search and apply for jobs easily

5

- Provides simple and user-friendly interface

6

7

- Reduces time and effort in hiring process

8

- Improves access to employment opportunities

9

PROBLEM STATEMENT

1 traditional job search process is time-consuming and inefficient

2 Lack of a centralized platform for job seekers and employers

3 Difficulty in finding relevant job opportunities

4 Employers face challenges in reaching suitable candidates

5 Manual hiring processes lead to delays and errors

6 Limited access to job information in rural or remote areas

7 Lack of transparency in application and selection process

8 Need for a simple, digital solution to streamline recruitment and job searching

1

2

3

4

5

6

7

8

9

OBJECTIVE(S)

1

Develop a user-friendly web application for job seekers and employers

2

Provide a centralized platform for job posting and job searching

3

Enable employers to post, update, and manage job listings efficiently

4

•.

5

Allow job seekers to search, view, and apply for jobs

6

Simplify and automate the recruitment process

7

Improve accessibility to employment opportunities

8

Ensure faster communication between employers and candidates
Support equal job opportunities
and reduce hiring barriers

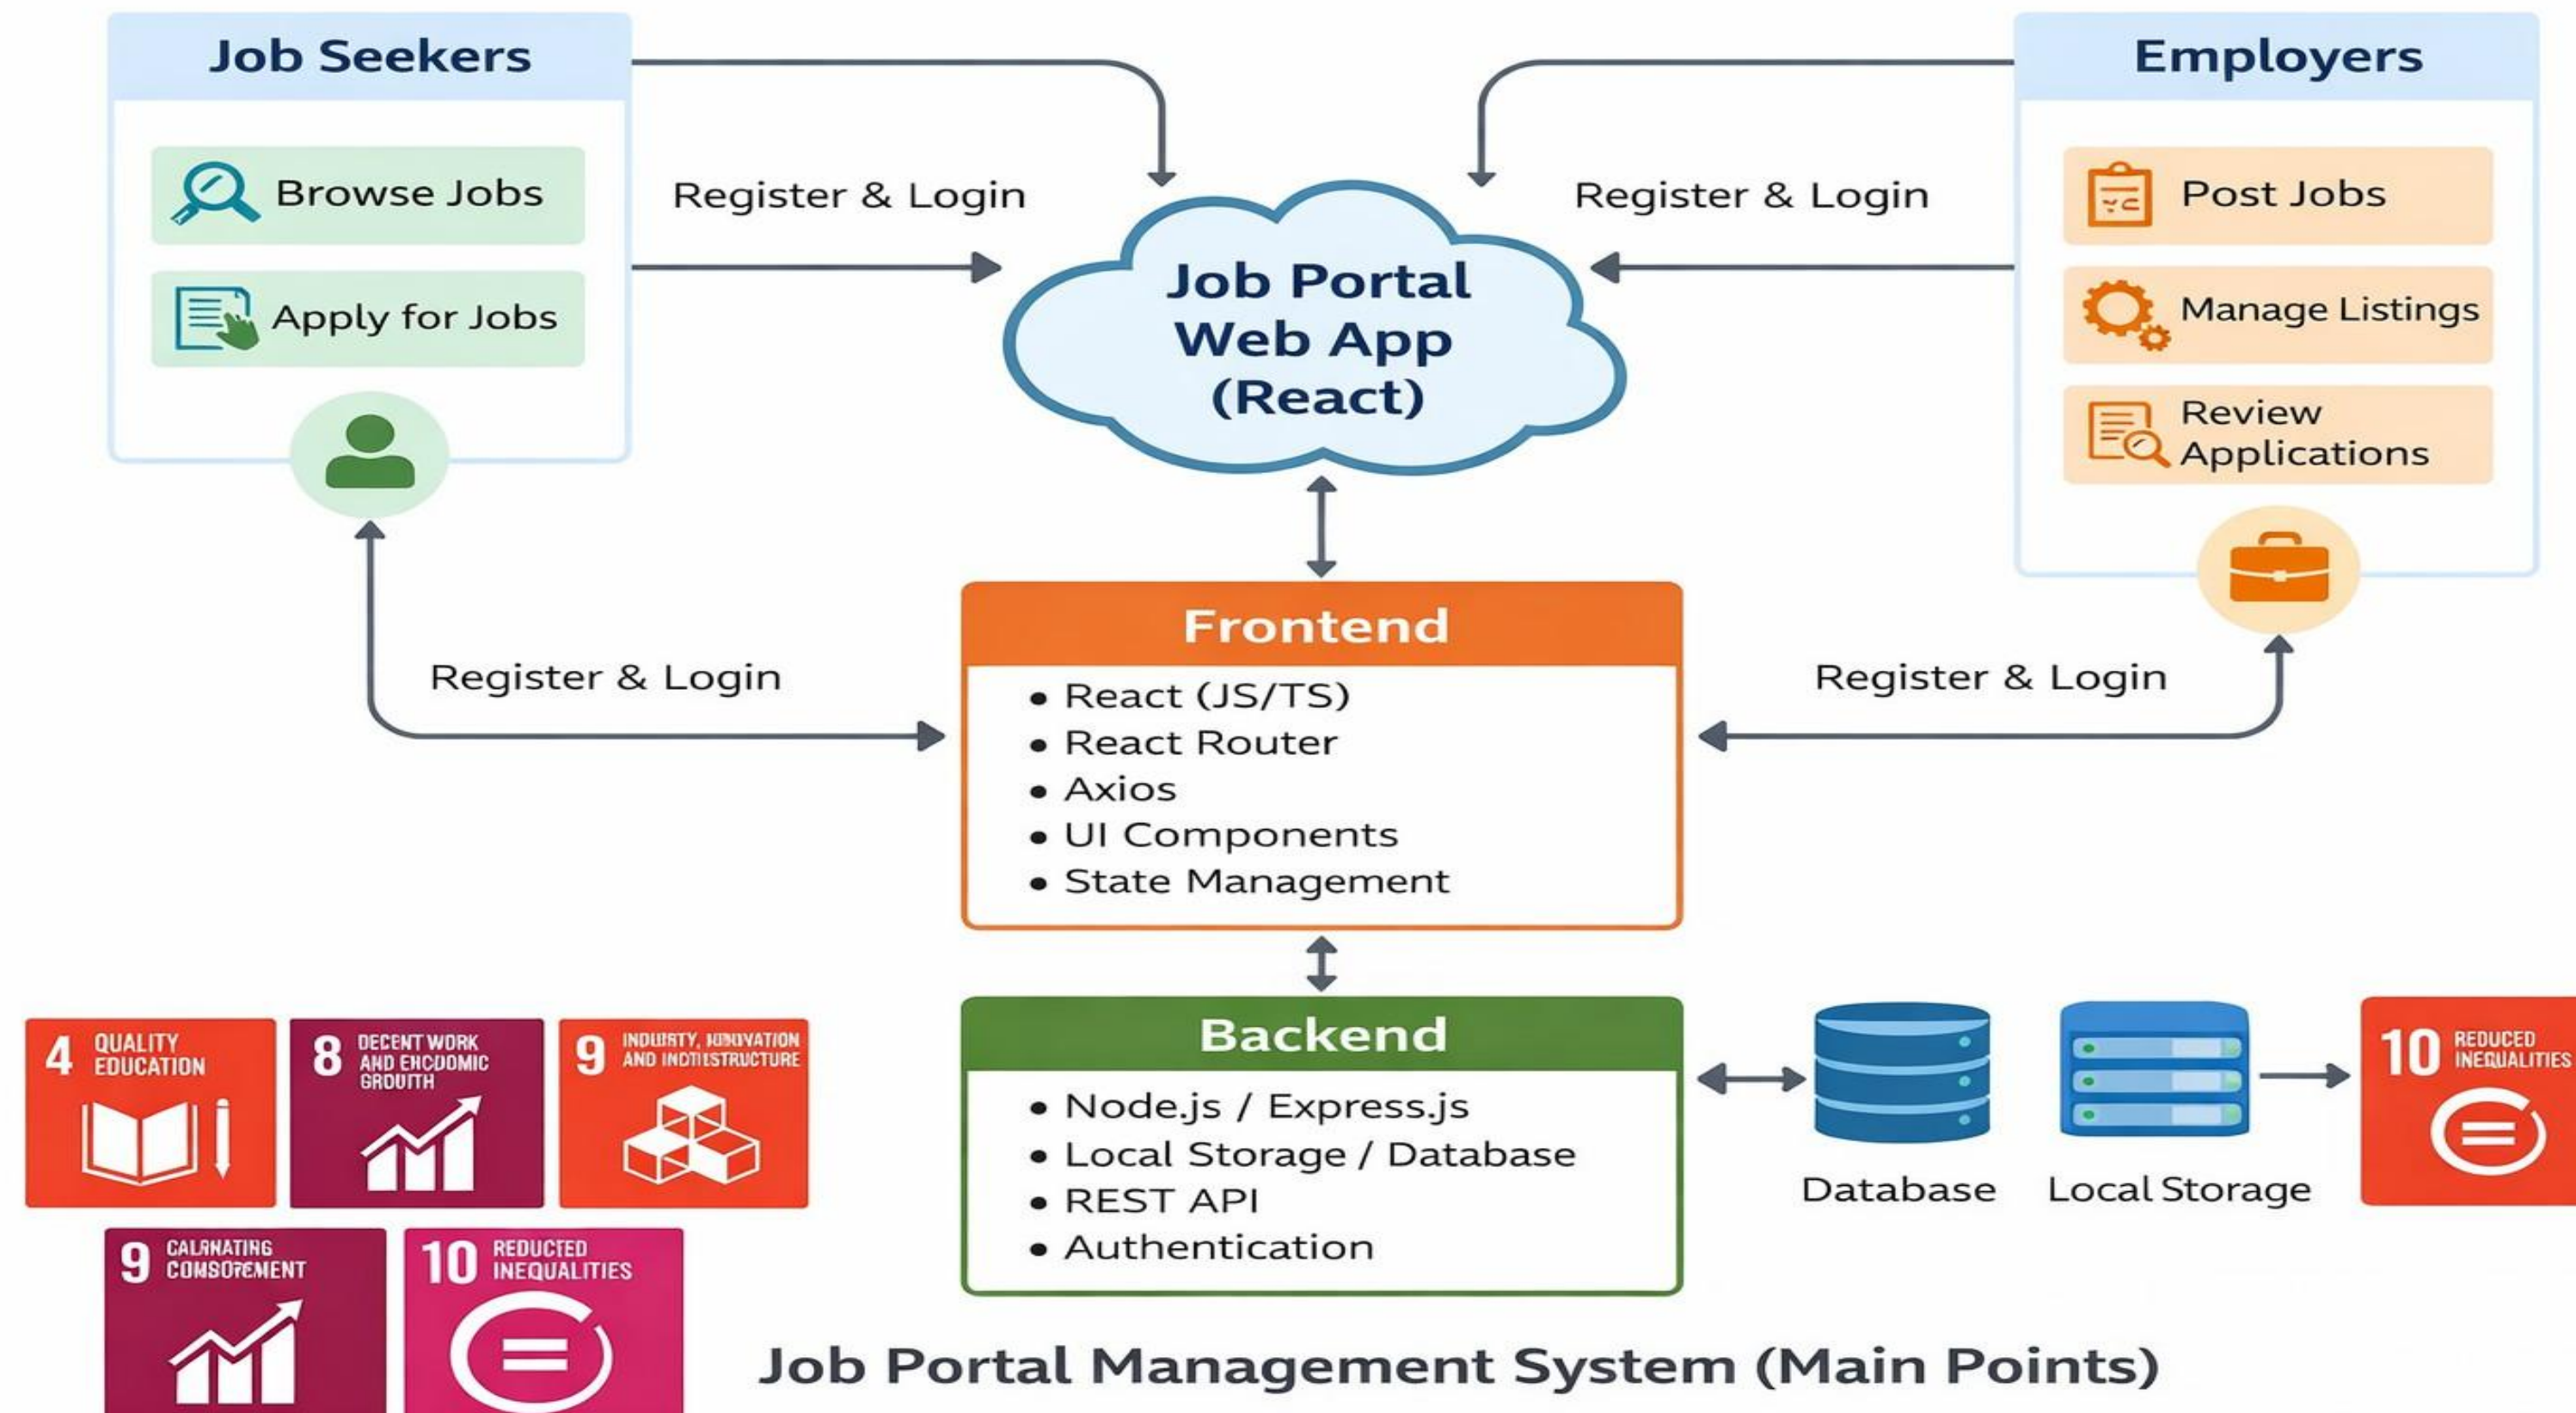

9

Enhance overall efficiency of the job hiring system

PROPOSED SYSTEM

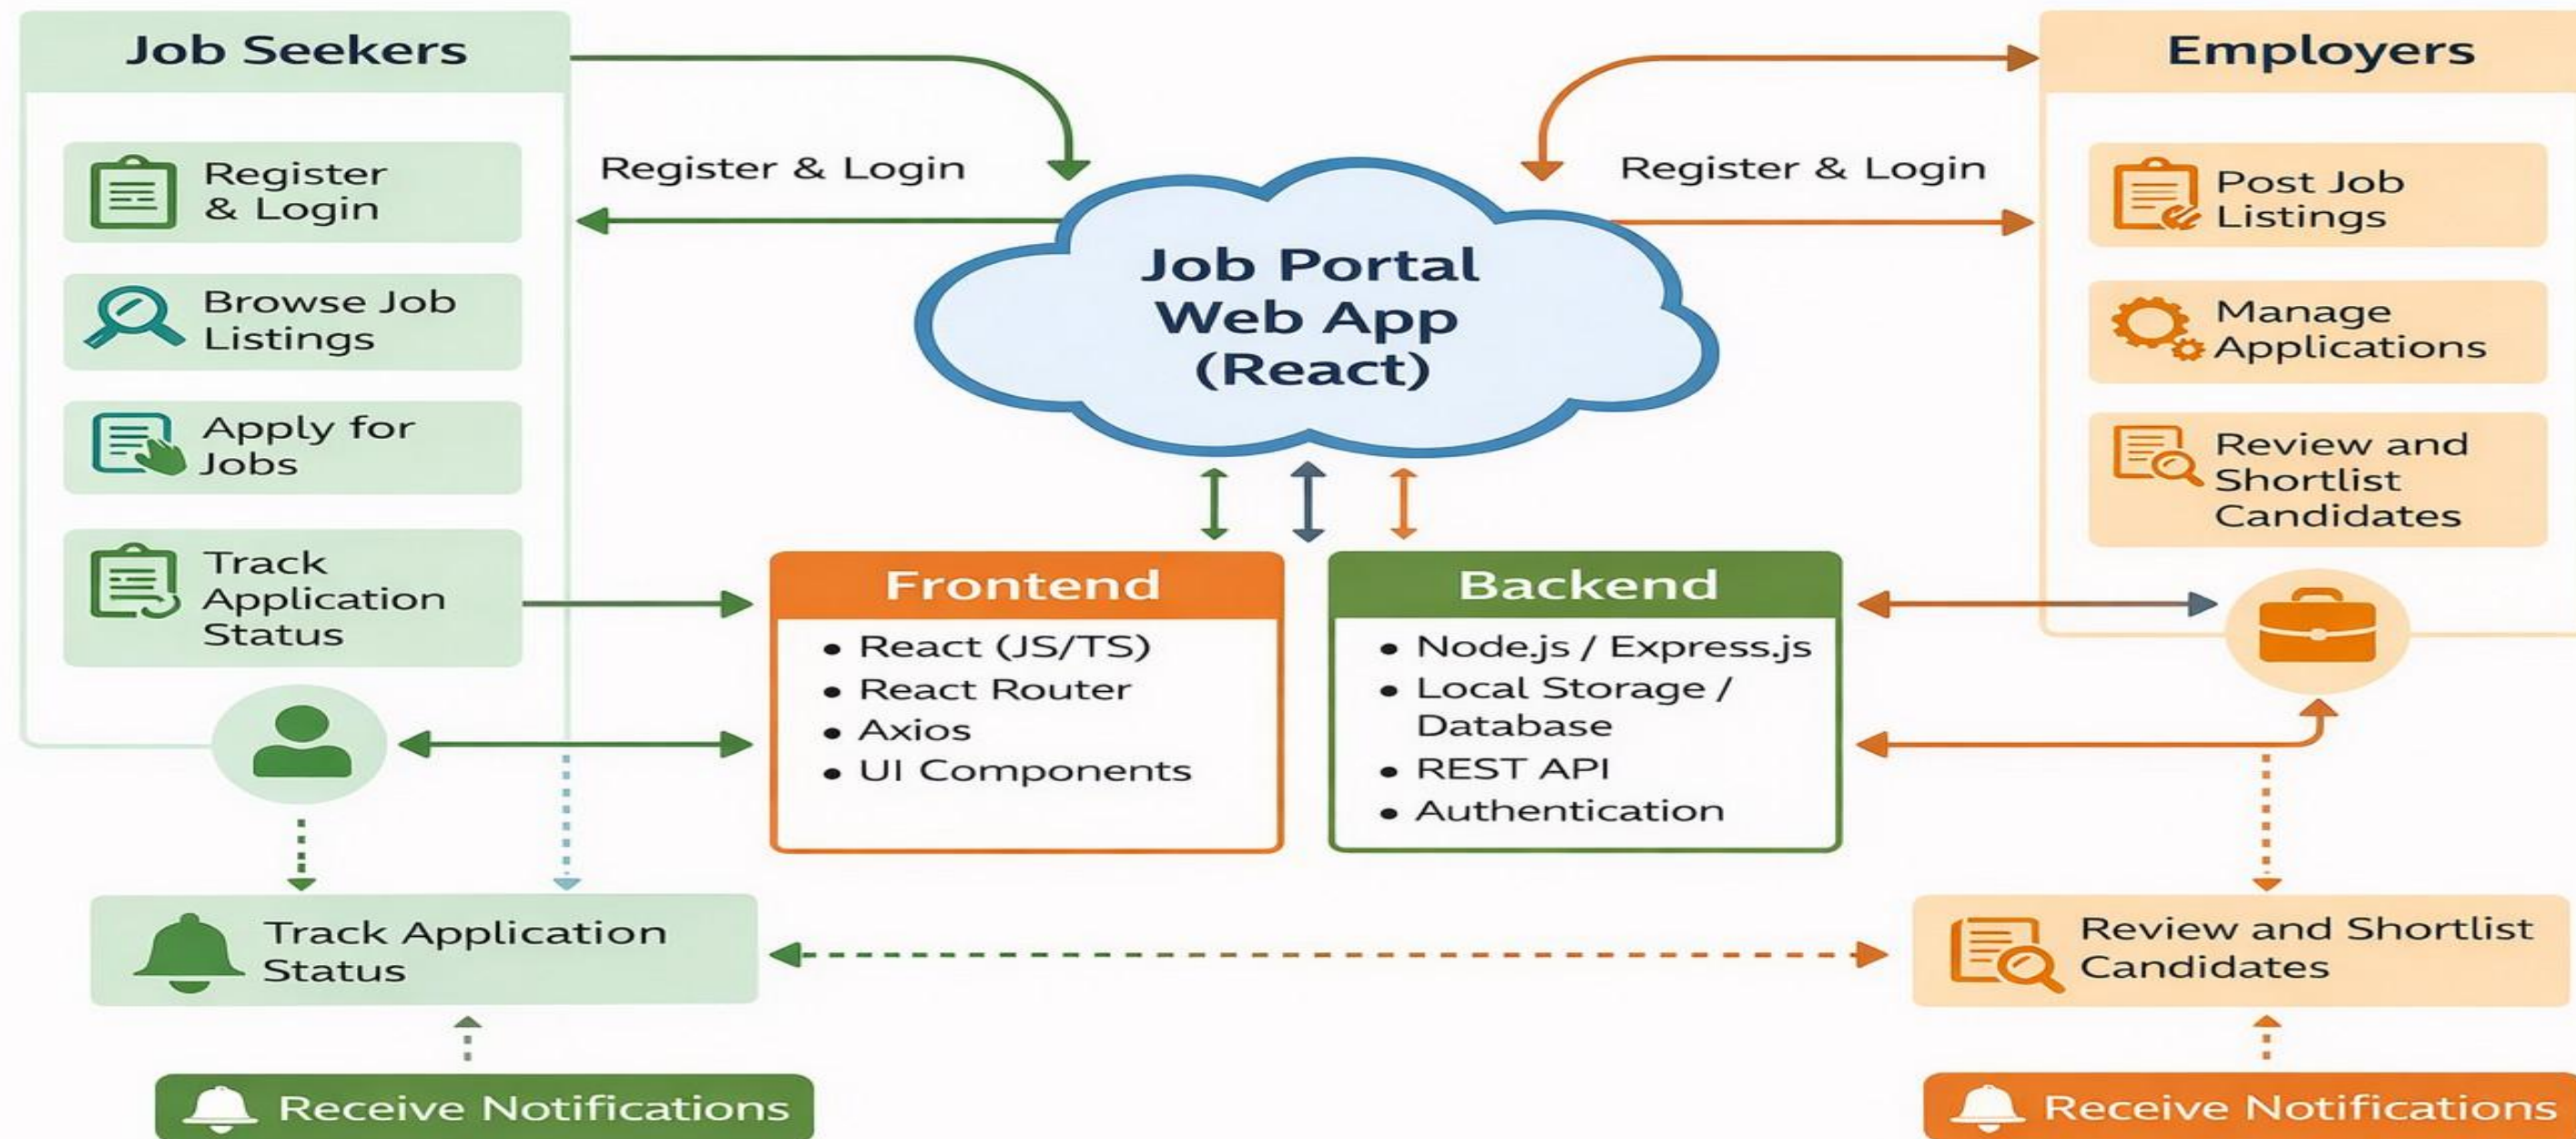

- 1 - Develop a web-based application using React
- 2 - Provide a centralized platform for job seekers and employers
- 3 - Enable user registration and login for secure access
- 3 - Allow employers to post, edit, and delete job listings
- 4 - Allow job seekers to search and apply for jobs online
- 4 - Display job details with role, company, location, and requirements
- 4 - Implement simple and intuitive user interface
- 5 - Store and manage data using local storage or backend database
- 6 - Provide real-time updates on job postings and applications
- 6 - Ensure faster and more efficient recruitment process
- 7 - Improve transparency and accessibility in job hiring
- 8 - Support scalable design for future enhancements
- 9

PROPOSED SYSTEM ARCHITECTURE

WORKFLOW

How It Works – Job Portal Management System

WORKFLOW

1

User registers and logs into the system

2

Job seeker browses available job listings

3

Job seeker selects a job and applies

Application is stored in the system

4

Employer logs in and posts job openings

5

Employer views applications received

6

Employer reviews and shortlists candidates

System updates application status

7

Job seeker tracks application status

Notifications are sent to both user and employe

8

9

TECHNOLOGIES USED

Frontend:

React.js

HTML5

CSS3

JavaScriptReact

Router

Backend:

Node.js

Database:

Local Storage / MongoDB (optional)

Tools:

Git

GitHub

VS Code

npm (Node Package Manager)

MODULE DESCRIPTION

1

2

Module 1: User Management

Handles user registration, login/signup, profile management, and secure authentication for both job seekers and employers.

4

Module 2: Job Seeker Management

Allows users to browse jobs, search and filter listings, apply for jobs, and track application status.

5

Module 3: Employer Management

Enables employers to post job openings, manage job listings, and review and shortlist candidates.

6

7

Module 4: Backend Processing

Implements core logic, processes requests, validates data, and manages communication between frontend and database.

8

Module 5: Database Management

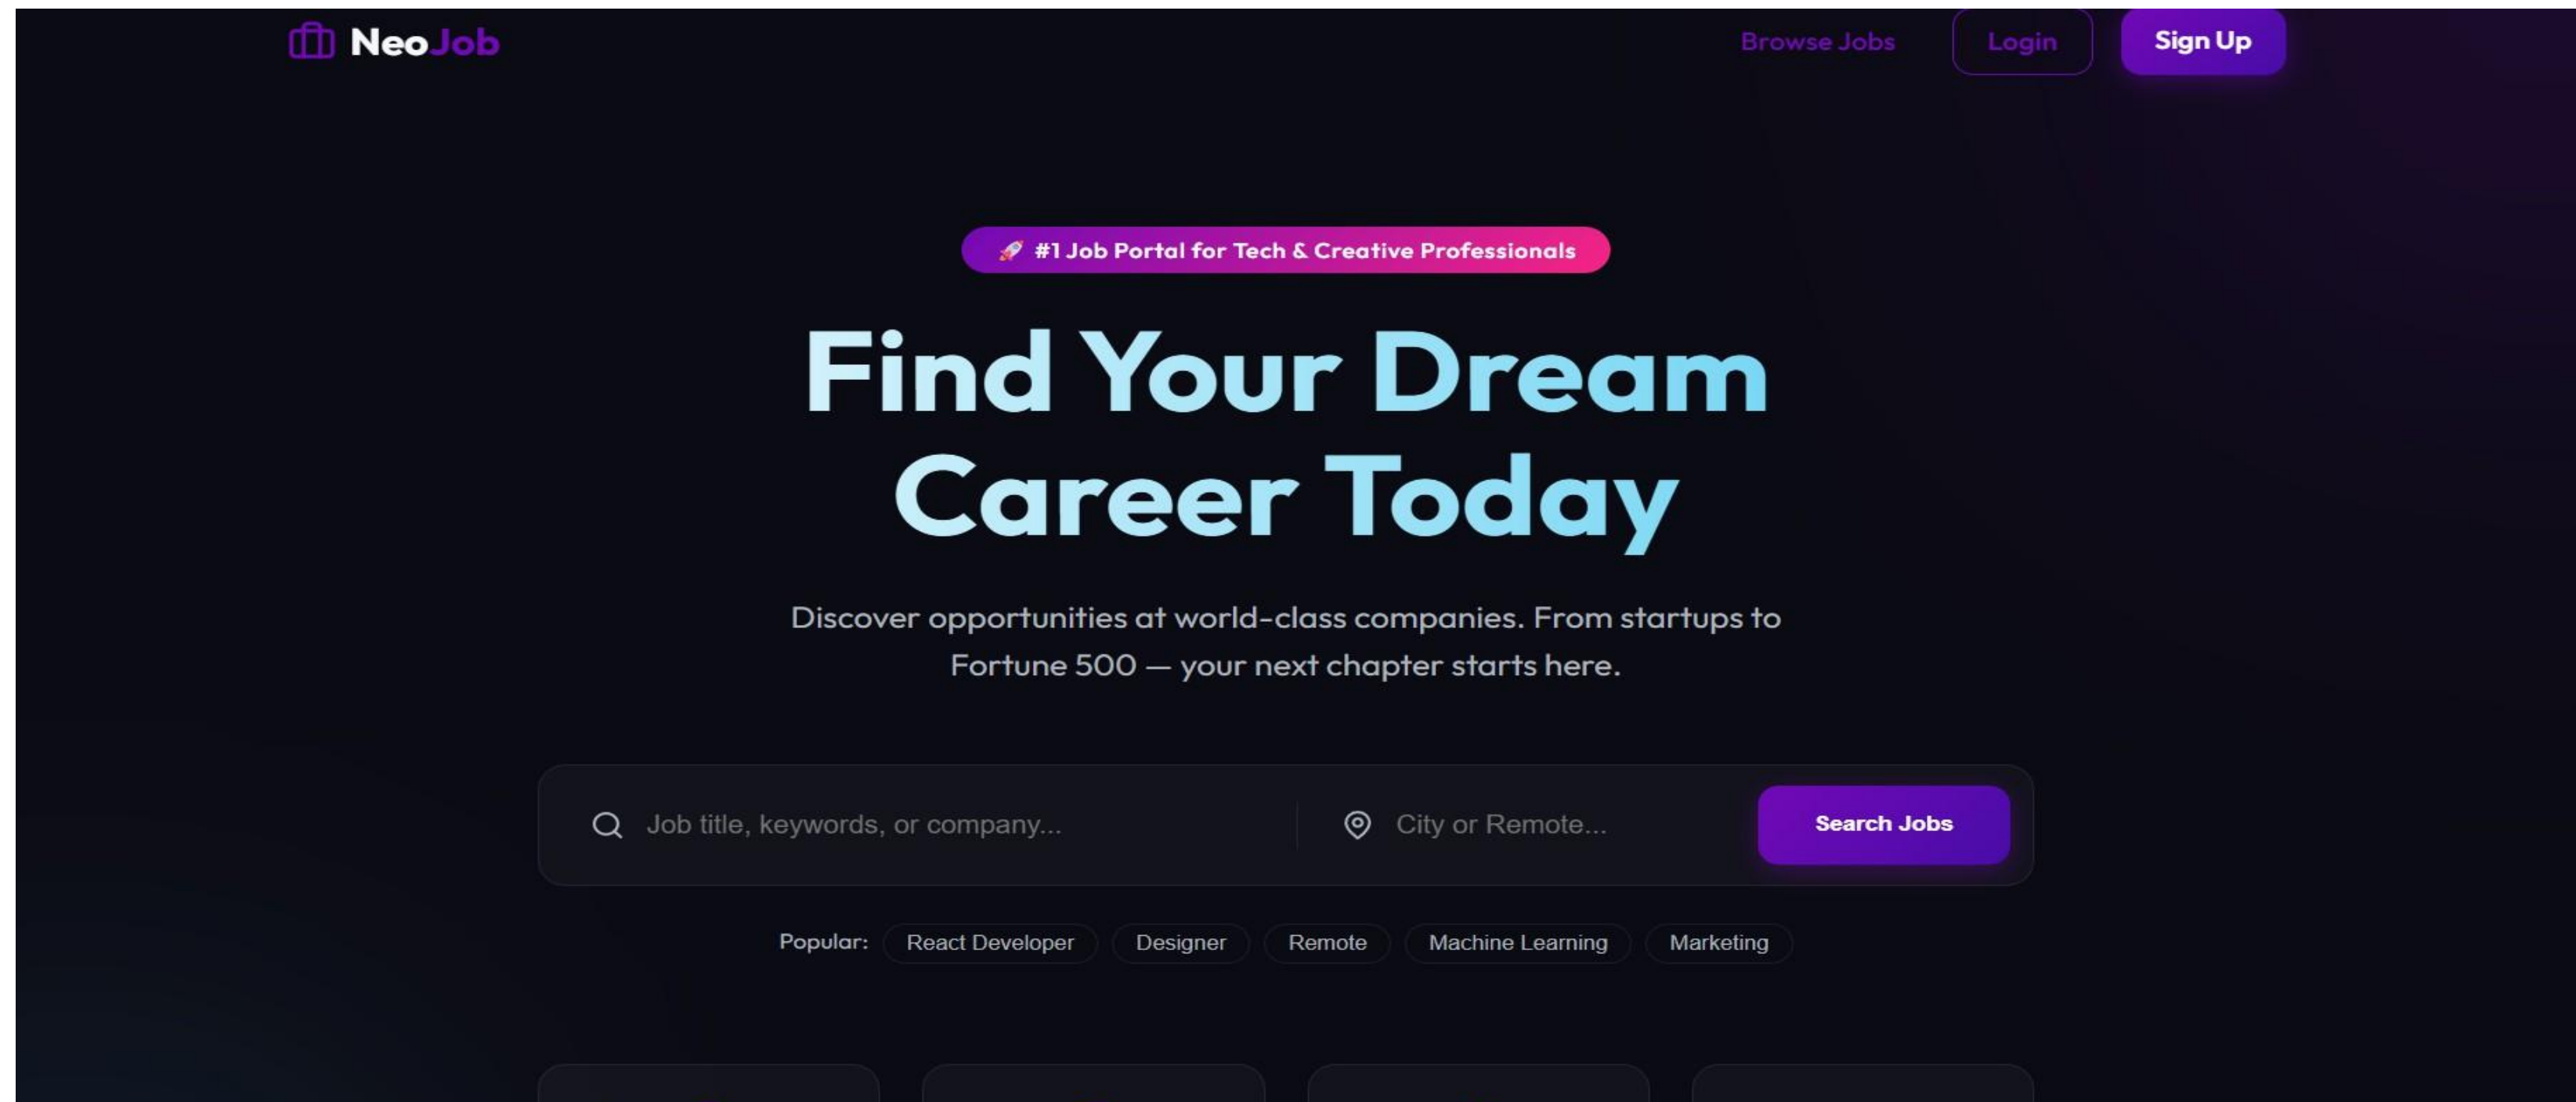

Stores and manages user data, job details, and application records, ensuring data security and integrity.

9

Module 6: Notification & Reporting

Provides updates on job applications, alerts for new jobs, and basic reports on job postings and applications.

IMPLEMENTATION SCREENSHOTS

Homepage:

.The Home Page displays all available job listings in a clear and user-friendly interface. It allows users to quickly browse, search, and access job details or apply directly.

4

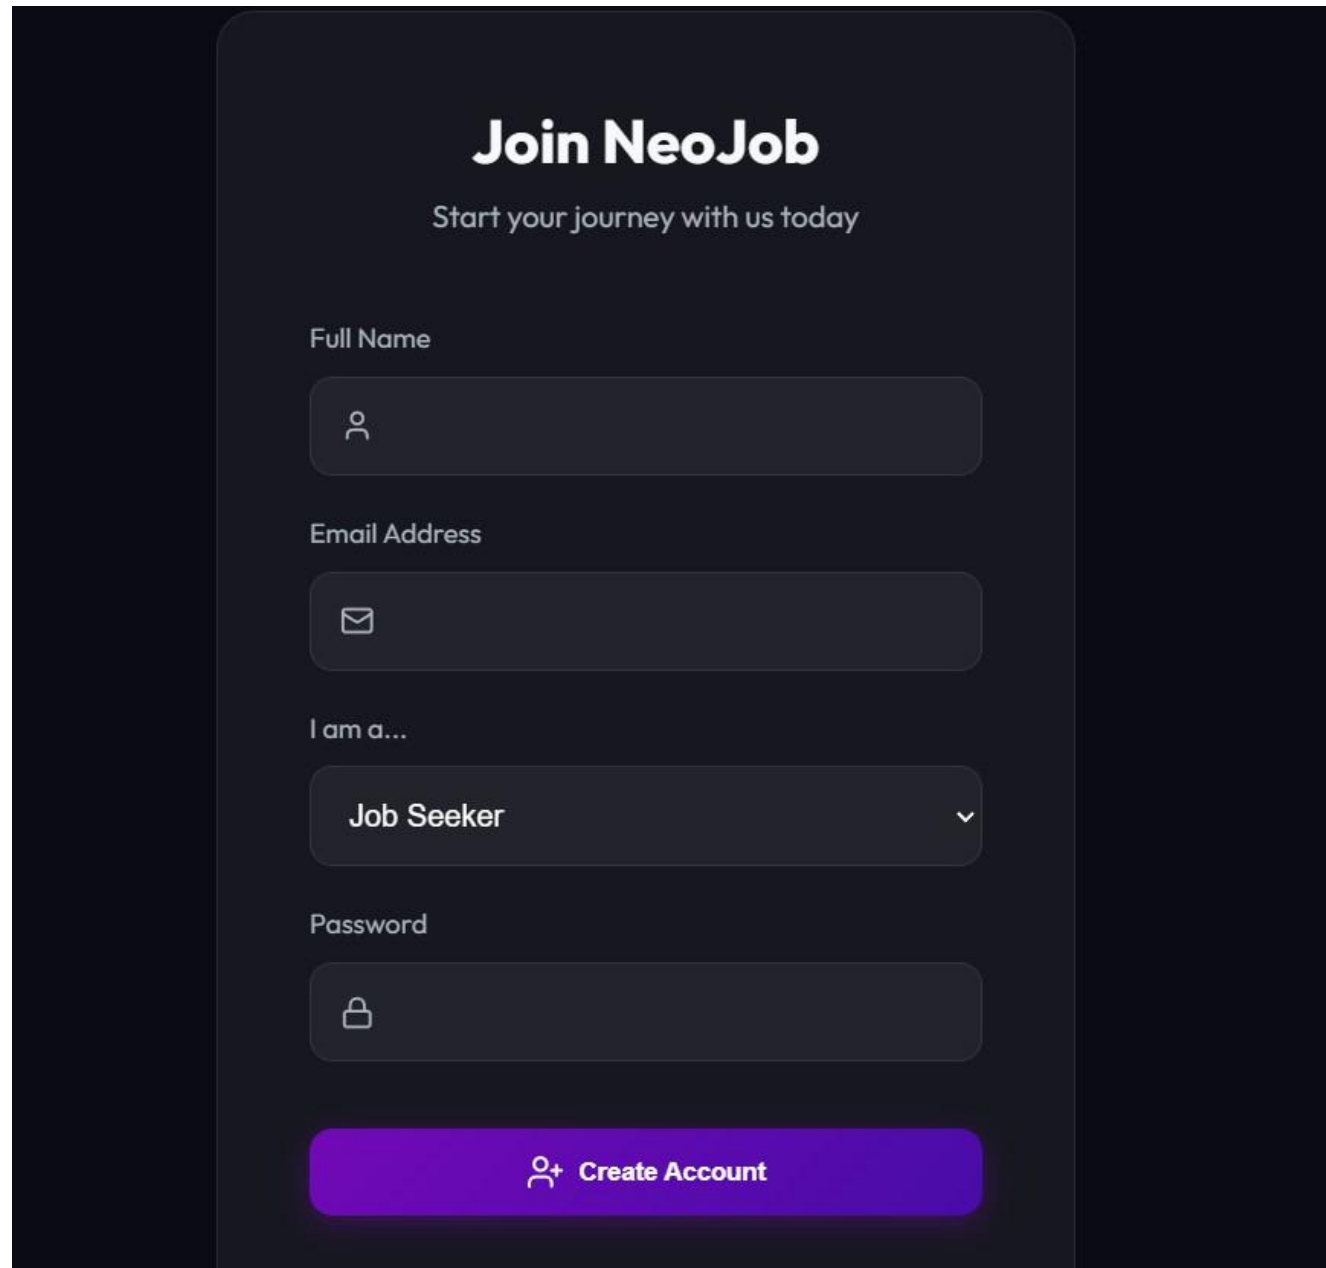

5

6

7

8(B)

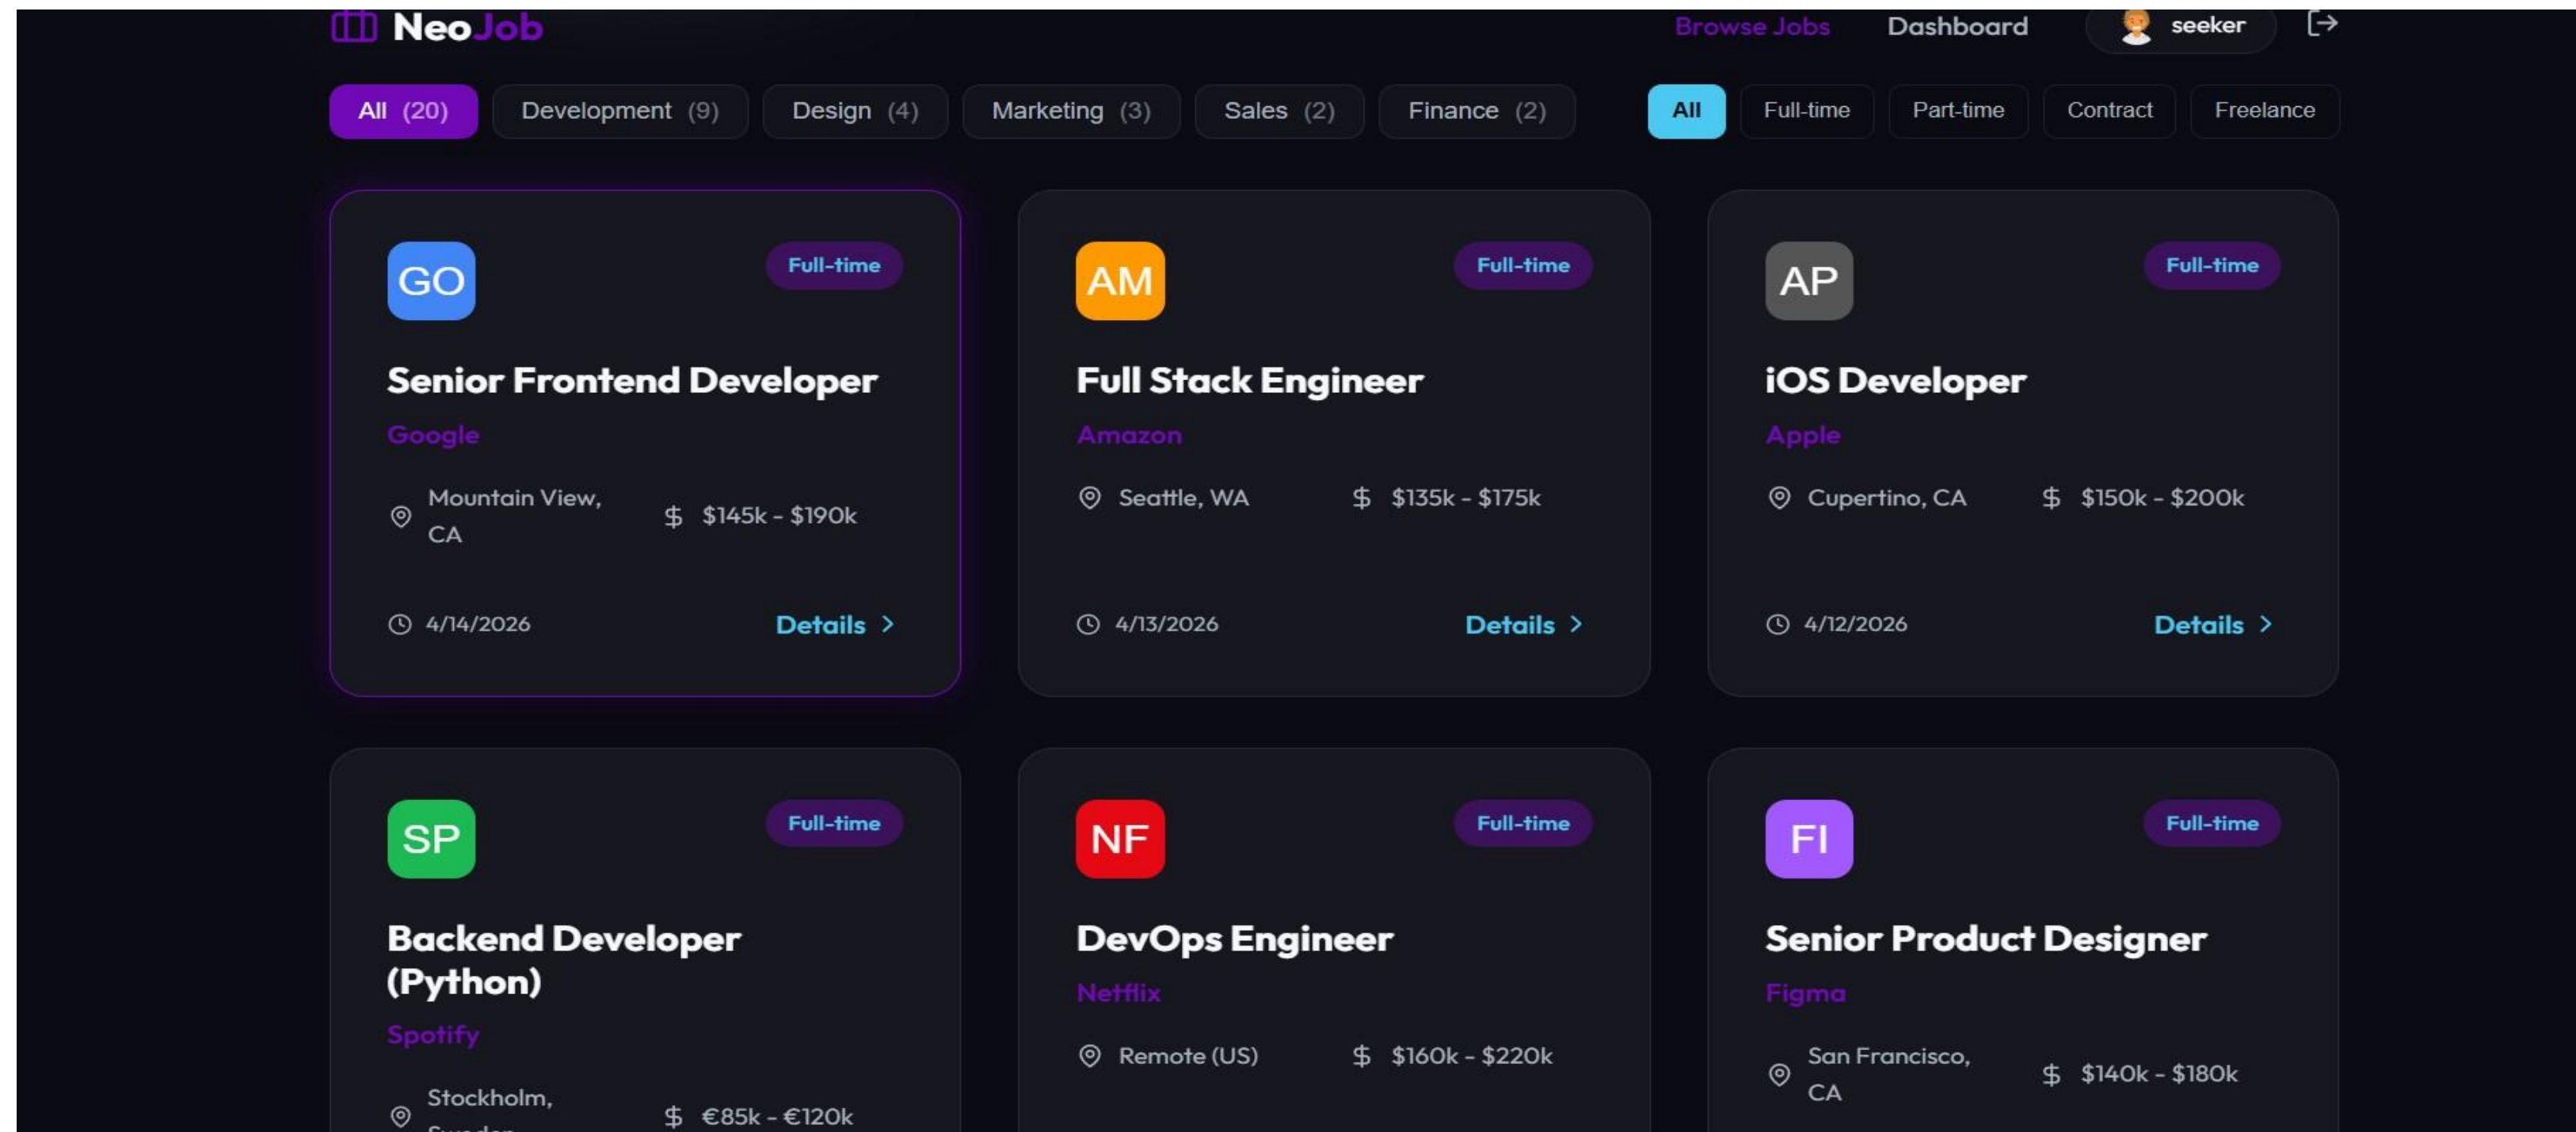

9

Main Module:

The Main Module acts as the central part of the system that connects all other modules and manages overall functionality.

It controls user interactions, coordinates between frontend and backend, and ensures smooth flow of job posting, searching, and application processes.

IMPLEMENTATION SCREENSHOTS

Output:

Displays job listings, allows applications, and enables employers to manage applicants efficiently.

ADVANTAGES & LIMITATIONS

1

Advantages:

2

- Easy access to job opportunities

3

- Saves time and effort in hiring process

4

- User-friendly and centralized platform

5

- Faster communication between users and employers

6

Disadvantages:

7

- Requires internet access

8

- Data privacy and security concerns

9

- Limited features without backend integration

- Dependence on system maintenance and updates

Thank you
